## Wheel Set for Vacuum Power Handy RS-VPH

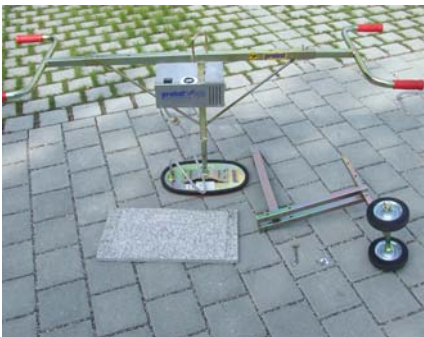

### Task:

Up to now, for transportation and installation of slabs and kerbs with the battery-driven Vacuum Power Handy VPH 150 or VPH 100, always two people have been necessary.

However, often times relatively thin and small elements have to be installed. Such elements are not very heavy. Also in such cases, the standard 2 man VPH would work fine, the work would be backsaving and also complies with the Health and Safety regulations. But the labour cost would be relatively high.

### Solution:

The Wheel Set for Vacuum Power Handy RS-VPH can be fitted to any standard VPH within approx 2 minutes

Now slabs can be installed by one operator only in a backsaving manner

Also non-porous (wet cast) kerbs can be installed

Typ	Suitable for Device	Dead Weight (kg)	Order Number
RS-VPH	VPH 100 or VPH 150		4271.0072

### Advantages:

Now a Wheel Set for Vacuum Power Handy RS-VPH is available. This turns the standard VPH two man vacuum slab lifter into a single operator trolley VPH Mobil.

Labour cost is reduced drastically, without much back strain for the operator and without violating the health and safety regulations.

The two solid rubber tires are carrying the load, the operator is pushing the unit along. The RS-VPH can be mounted on a standard VPH within approx. 2 minutes, the unit is ready to be used immediately. The handle for the second operator usually stays at its position. In case there are some obstacles, a second operator can help to lift the complete unit over this obstacle. The capacity of the battery is usually sufficient for a complete working day. The battery then can be charged over night or can be exchanged for a spare battery.
